Babies who are exposed to crack in the uterus are often born prematurely and tend to be smaller than other babies.. " In 1985, Dr Ira Chasnoff wrote an article in the New England Journal of Medicine claiming that babies who were exposed to crack in the womb wound up with permanent cognitive impairment.. Since then, many researchers have challenged the idea of the crack baby A 2004 study by the Society for Research in Child Development found that prenatal cocaine exposure did not affect a child's development by age two, and it suggested that the harmful effects previously found in cocaine-exposed babies may actually have had more to do with post-natal care than with exposure to the drug in the womb.
